

Accessibility & Inclusivity Checklist

Applied to Digital Literacy Fundamentals

Note on This Instance of the Checklist

This is the same reusable QA tool already established in this portfolio, applied here as a worked example against a ground-up course build rather than an existing module under audit. “Pass” means the criterion is met by design. “Built” means implemented and verifiable in the current build. “Proposed” means specified but not yet implemented. “Gap” means identified and not yet resolved.

1. Platform & Access

Criterion	Status	Notes / Where Verified
No content requires an active internet connection to complete.	Pass	Built platform-independent from the start — see Task & Content Analysis, Section 6. No lesson, including the capstone, references outbound content.
No task depends on a tool or system outside the platform that hasn't been verified to exist.	Pass	The simulated environment is fully self-contained by design — see Task & Content Analysis, Section 5.
Course functions the same regardless of facility hardware variance (screen size, touch sensitivity).	Gap	Not verified against actual device models in circulation — same open item as the Digital Literacy On-Ramp analysis, Section 7. Higher stakes here since the capstone's interaction fidelity depends on touch precision holding up across devices.

2. Learner Control & Pacing

Criterion	Status	Notes / Where Verified
No content is gated behind a forced wait with no visible way to proceed or skip.	Pass	No timers or forced-wait mechanics anywhere in the course design — see Instructional Strategy, Section 3.
Learner can repeat, revisit, or slow down without penalty or visible tracking of attempts.	Pass	Confirmed by design across all six lessons, including the capstone — see Learning Objectives, Access & Completion Objectives.
No comparative or competitive element (leaderboard, ranking, public score).	Pass	Confirmed absent by design — see Instructional Strategy, Section 3.

3. Language & Content

Criterion	Status	Notes / Where Verified
No stigmatizing, clinical, or institutional language in instructional copy.	Pass	Course framing tied to concrete learner goals (job, interview), not deficit language — see Needs & Audience Analysis, Section 6.
Instructions phrased as invitations, not commands.	Proposed	Style Guide, Section 4, specifies this standard; not yet verified line-by-line against drafted screen copy since screen copy hasn't been finalized in the Storyboard yet.
Copy checked against a plain-language reading level target (approx. 8th–9th grade).	Proposed	Target stated in Style Guide, Section 4; not yet verified against a readability tool.
No content assumes shared trauma, hardship, or personal disclosure from the learner.	Pass	Course content is entirely mechanical/procedural (mouse, keyboard, windows) — no prompt requires personal disclosure by design.

4. Visual & Interaction Accessibility

Criterion	Status	Notes / Where Verified
No icon-only navigation — every icon is paired with a text label.	Pass	Specified for both the course shell and the simulated desktop — see Style Guide, Section 2.
Sufficient color contrast between text/buttons and background.	Proposed	Not yet verified against a formal WCAG contrast checker for either visual system.
Generous, forgiving tap targets for an audience that may be new to touchscreens.	Proposed	Specified in Style Guide, Section 2 (windows) but not yet measured against a minimum target size standard — flagged for the build phase.
Audio and text content are reviewed for parity, and any difference is intentional and documented.	Gap	No audio narration currently planned for any lesson. Worth a deliberate decision — add audio for Lessons 1–5 consistent with prior portfolio work, or document why text-only is sufficient here — rather than leaving it undecided.

5. What This Checklist Doesn't Cover

This audit was built from the design and specification documents, not a live build. Screen reader compatibility, formal WCAG contrast ratios, and physical tap-target measurements are flagged as “Proposed” or “Gap” rather than marked Pass, because they can't be verified before the Claude Design and Claude Code build phases produce something to test directly.
