

Content Quality Rubric

Applied to Digital Literacy Fundamentals — Worked Example

Note on This Instance of the Rubric

This is the same reusable evaluation tool already established in this portfolio, scored here against Digital Literacy Fundamentals at the design stage — before the Claude Design and Claude Code build phases — to confirm the plan meets the standard before development time is spent on it. The scoring scale (1 = Not Met, 2 = Partially Met, 3 = Met, 4 = Exceeds) is unchanged from the original rubric.

Scored Against This Course's Design Documents

Criterion	Score	Rationale
No external links or outbound navigation required	4	Built platform-independent from first principles, not retrofitted — the entire course, including the capstone simulation, is self-contained by design. Exceeds because this was a design constraint from the start, not a fix applied after the fact.
No task depends on a tool or system not confirmed to exist on this platform	4	The simulated environment is purpose-built rather than assumed — see Task & Content Analysis, Section 5, for its full specification.
Course functions the same regardless of device/hardware variance	2	Not yet verified against real device models — flagged as a Gap in the Accessibility & Inclusivity Checklist. Genuine open risk, not yet a fix.
No content is gated behind a forced wait with no visible way to proceed	4	No timers or forced-wait mechanics anywhere in the design.
Learner can repeat, revisit, or slow down without penalty or visible tracking	4	Confirmed by design across all six lessons, including the capstone.
No comparative or competitive element	4	Confirmed absent by design.
No stigmatizing, clinical, or institutional language	3	Framing ties to concrete learner goals rather than deficit language, meeting the standard. Not scored as Exceeds since screen-level copy hasn't been finalized yet to confirm consistency throughout.
Instructions phrased as invitations, not commands	2	Standard is specified in the Style Guide but not yet verified against actual drafted screen copy — genuinely unscored territory until the Storyboard's copy is finalized.
Reading level appropriate for a general adult audience	2	Target stated, not yet verified with a readability tool — same caveat as above.

Criterion	Score	Rationale
No content assumes shared trauma, hardship, or requires personal disclosure	4	Content is entirely procedural (mouse, keyboard, windows) — no prompt could require personal disclosure even incidentally.
No icon-only navigation	3	Specified for both visual systems in the Style Guide. Not yet built, so scored as Met-by-design rather than Exceeds-in-practice.
Sufficient color contrast	2	Specified qualitatively (“high-contrast”) but not yet checked against WCAG AA — flagged as Proposed in the Accessibility Checklist.
Generous, forgiving tap targets	2	Same status — specified in principle, not yet measured.
Stated or inferable learning objective the content actually delivers on	4	Terminal and enabling objectives stated explicitly for the course and every lesson — see Learning Objectives document — with a direct, hands-on capstone that tests them rather than a passive recap.
Content chunked to manage cognitive load rather than one continuous block	4	The entire course structure — five discrete lessons before a single capstone — is a cognitive-load decision, not a formatting one. See Instructional Strategy, Section 2.

Average score across these fifteen criteria: approximately 3.1 of 4 — reflecting a design that is structurally strong on platform independence, learner control, and objective alignment, with the lower scores concentrated entirely in items that can't be verified until real screen copy and a real build exist to test against. That's an honest, not inflated, read: a rubric run at the design stage should show open items where a build hasn't happened yet, not a clean sweep.

How This Differs From Scoring an Existing Module

- Every score above of 3 or 4 reflects a decision baked into the design from the outset, not a fix applied after a flaw was found — there's no “original, pre-revision” version of this course to compare against, since nothing existed before this design process began.
- Every score below 3 reflects something genuinely unverifiable yet, not something wrong — contrast ratios and tap-target sizing can't be measured against documents alone, and instruction phrasing can't be fully scored until screen-level copy is written in the Storyboard.
- This is the intended use of a rubric built to be reusable: catching gaps before development time is spent, not just grading a finished product after the fact.
