

Learning Objectives

Digital Literacy Fundamentals — Course-Level and Lesson-Level Objectives

Terminal Course Objective

By the end of this course, the learner will be able to operate the core input and navigation functions of a laptop — mouse, keyboard, and windows — and demonstrate that competency in a hands-on simulated practice environment, having had no prior direct experience with a laptop, and without requiring an internet connection at any point.

The simulated-practice clause isn't filler. A learner could pass a course that only asks them to read about clicking; this course asks them to actually click, in an environment built to fail safely if they get it wrong — which is the entire justification for building a capstone simulation instead of ending the course on a definition screen.

Enabling Objectives by Lesson

Lesson 1 — Orientation

Learner Will Be Able To...	Maps To
Explain, in their own words, why laptop fluency matters for a specific goal they hold (a job application, an interview, staying in touch) — not just recite that it's important.	Lesson 1, orientation screens

Lesson 2 — The Mouse

Learner Will Be Able To...	Maps To
Identify what a single click does when shown an example.	Lesson 2, click concept screens
Distinguish a single-click outcome from a double-click outcome when shown both.	Lesson 2, discrimination screens
Identify a right-click menu as a set of additional options, not an error.	Lesson 2, right-click screens
Describe the sequence of a drag action (press, hold, move, release) after viewing a guided demonstration.	Lesson 2, drag demonstration screens

Lesson 3 — The Keyboard

Learner Will Be Able To...	Maps To
Type letters and numbers into a text field and see them appear.	Lesson 3, typing practice screens
Use Backspace/Delete to correct a deliberately-seeded mistake.	Lesson 3, correction screens
Identify Enter/Return as the way to confirm or submit an entry.	Lesson 3, confirmation screens

Learner Will Be Able To...	Maps To
Use Shift to produce a capital letter on request.	Lesson 3, capitalization screens

Lesson 4 — Windows

Learner Will Be Able To...	Maps To
Describe a window as a distinct space separate from the desktop behind it.	Lesson 4, window-concept screens
Open and close a window using a visible control.	Lesson 4, open/close screens
Minimize a window and correctly identify that it still exists afterward.	Lesson 4, minimize/restore screens
Switch between two open windows.	Lesson 4, window-switching screens

Lesson 5 — The Desktop

Learner Will Be Able To...	Maps To
Identify a desktop icon as a launch point, distinct from background imagery.	Lesson 5, icon-recognition screens
Identify the taskbar as a persistent home base for finding open windows.	Lesson 5, taskbar screens

Lesson 6 — Capstone Practice Environment

Learner Will Be Able To...	Maps To
Independently complete a short multi-step task (e.g., open two windows, type a short entry into one, switch to the other, minimize it) inside the simulated environment, applying every skill from Lessons 2–5 without step-by-step prompting.	Lesson 6, full capstone simulation

Access & Completion Objectives

These describe what the learner has to be able to do just to reach the content objectives above, given the constraints defined in the Needs & Audience Analysis. A course can meet every enabling objective above and still fail these.

Access & Completion Objective	Why This Has to Be Stated Explicitly
Complete the entire course, including the capstone, without needing an active internet connection at any point.	Per the platform's closed-tablet-system constraint — the simulated environment must be fully self-contained, not a wrapper around live web content.

Access & Completion Objective	Why This Has to Be Stated Explicitly
Recover from any wrong tap or navigation error inside the simulation without losing progress or needing outside help.	No IT support is available on demand in a facility setting. A simulation that requires troubleshooting help to recover from a mis-tap defeats its own purpose.
Repeat any lesson or the capstone as many times as needed without any visible record of attempts.	Consistent with the trauma-informed, non-comparative pacing principle already established across this portfolio's other courses.

Note on Scope

These objectives cover mouse, keyboard, windows, and desktop fundamentals only. Email and video-call (Zoom) skills are deliberately out of scope for this course and are planned as separate, later courses in the same digital-literacy sequence — introducing them here would require concepts (attachments, contacts, audio/video permissions) this course doesn't teach and doesn't need to.
