Digital Literacy Fundamentals — Full Course, Six Lessons, 26 Screens

How to Read This Document

Screens are numbered within their lesson, not continuously across the course, since each lesson is a discrete unit a learner could revisit independently. Interaction notes reflect the tap-based input model locked in the Task & Content Analysis — no simulated cursor anywhere in this course, including the capstone.

Lesson 1 — Orientation

#	Screen Type	Content / Copy	Interaction Notes
1.1	Title	“Digital Literacy Fundamentals” / “Getting comfortable with a laptop, one step at a time”	Next button advances.
1.2	Motivation	“Why This Matters” — short copy connecting laptop fluency to a job application, an interview, or staying in touch, tied to the learner's own goals rather than an abstract skill claim.	Next button advances to Lesson 2.

Lesson 2 — The Mouse

#	Screen Type	Content / Copy	Interaction Notes
2.1	Title	“The Mouse” / “How you'll point, select, and move things”	Next button advances.
2.2	Concept + practice	“A Single Click” — short explanation, then a low-stakes practice icon the learner taps to see a confirmation state.	Tap registers a visible highlight. Labeled “This is a click.”
2.3	Discrimination	“One Tap or Two?” — shows both a single-click and double-click outcome side by side, asks the learner to predict which is which before revealing the answer.	Tap-to-reveal, no scoring, unlimited retries.
2.4	Concept	“Right-Click: More Options” — explains a right-click menu as additional choices, not an error, with a practice example.	Tap opens a simple options menu; tap outside or an X closes it, teaching safe exit from an unfamiliar state.
2.5	Guided demo	“Dragging” — a short animated or step-through sequence showing press-hold-move-release as one continuous action.	Step-through, not freeform drag — per the input-model decision, this is demonstrated, not performed by the learner at this stage.

Lesson 3 — The Keyboard

#	Screen Type	Content / Copy	Interaction Notes
3.1	Title	“The Keyboard” / “Typing, correcting, and confirming”	Next button advances.
3.2	Practice	“Typing” — a text field where the learner types their own first name or any short text.	Native or on-screen keyboard writes into a visible field with immediate character feedback.
3.3	Seeded correction	“Fixing a Mistake” — field pre-filled with an intentional typo; learner uses Backspace/Delete to correct it.	Task completes when the corrected text matches the target; no penalty for extra attempts.
3.4	Concept	“Pressing Enter” — explains Enter/Return as the way to confirm or submit, with a practice field.	Learner presses Enter after typing; screen confirms “Entered!” rather than silently advancing, so the action is visibly meaningful.
3.5	Practice	“Capital Letters” — asks the learner to type a capitalized word using Shift.	Field validates the capital letter and gives a plain-language hint (“Try holding Shift while pressing the letter”) if the first attempt isn't capitalized.

Lesson 4 — Windows

#	Screen Type	Content / Copy	Interaction Notes
4.1	Title	“Windows” / “How programs open and stay organized”	Next button advances.
4.2	Concept	“What's a Window?” — visual comparison of the desktop with and without an open window, explaining it as a separate space.	Tap-to-toggle between the two states so the learner sees the difference directly, not just reads about it.
4.3	Practice	“Opening and Closing” — a practice icon opens a simple window with a visible × control.	Tap icon to open, tap × to close. Labeled with real-laptop equivalents throughout.
4.4	Practice, misconception check	“Minimize Doesn't Mean Delete” — learner minimizes a window, then is asked to find it again.	Window minimizes to a visible taskbar entry; learner taps the entry to restore it, directly disproving the “minimized = gone” assumption.

#	Screen Type	Content / Copy	Interaction Notes
4.5	Practice	“Switching Between Windows” — two windows open at once; learner taps between them.	Depends on 4.4 — the taskbar entry pattern just learned is reused here for switching, not introduced as a new concept.

Lesson 5 — The Desktop

#	Screen Type	Content / Copy	Interaction Notes
5.1	Title	“The Desktop” / “Your home base”	Next button advances.
5.2	Concept + practice	“Icons” — explains icons as launch points, with a practice desktop showing two or three icons to tap.	Tap opens a placeholder window, reinforcing the click concept from Lesson 2 in a new context.
5.3	Concept	“The Taskbar” — explains the taskbar as a persistent home base for finding open windows, directly referencing the minimize/restore practice from Lesson 4.	No new interaction — this screen is explanatory, consolidating a pattern the learner has already performed.

Lesson 6 — Capstone: Practice Environment

#	Screen Type	Content / Copy	Interaction Notes
6.1	Intro	“Your Turn” — frames the capstone as independent practice, not a test, consistent with the non-punitive framing established across this portfolio.	Next button advances into the live simulated desktop.
6.2	Task 1	“Open the Notes icon.”	Learner taps the correct icon among two or three on the simulated desktop. Real-laptop label available on tap-and-hold of a small “?” control, not shown by default.
6.3	Task 2	“Type your first name, then press Enter.”	Uses the on-screen or native keyboard inside the opened window; validates on Enter, matching the pattern from Lesson 3.
6.4	Task 3	“Open the Calendar icon too, then switch back to Notes.”	Requires two windows open and a taskbar switch — directly exercises the Lesson 4/5 dependency chain.

#	Screen Type	Content / Copy	Interaction Notes
6.5	Task 4	“Minimize the Calendar window.”	Learner uses the minimize control; task completes when the taskbar entry is confirmed still present and tappable.
6.6	Completion	“You Did It” — plain confirmation, no score, with an open-text “How would you improve this?” feedback field per the Evaluation Plan.	Optional feedback field, no character minimum, advances regardless of input.
